

COUNTIS E

Active/reactive energy meters and
multi-utility pulse concentrators

When **energy** matters

 **socomec**
Innovative Power Solutions

Energy meters for everyday efficiency

Your first step towards making savings, today's energy meters can do so much more than simply provide consumption readings. They now deliver highly accurate measurements - along with other electrical parameters essential for effectively managing your energy costs. Using COUNTIS E meters with COUNTIS ECi pulse concentrators and energy management software from Socomec, you have a complete system that centralises your data and makes it easier than ever to track your consumption.

A **complete system**
to centralise and track
your consumption

Cost optimisation

COUNTIS E meters - together with COUNTIS ECi pulse concentrators - allow you to :

- **centralise your multi-utility data** (electricity, water, gas, compressed air...),
- **easily allocate power** by area or by end-use.

Guaranteed measurements

COUNTIS E meters are MID directive "Module B+D" certified for easy energy billing.

Data analysis

COUNTIS E meters have advanced connectivity and an integrated web server, without any additional cost, for **viewing your consumption**:

- directly on the panel,
- remotely.

Control of your installation

With accurate information on voltages, current and power, the COUNTIS E has all the necessary data to **optimise the operation of your installation**.

COUNTIS E

Smart metering range, you can count on

GAMME 745 A

LARGEST AND MOST VERSATILE RANGE ON THE MARKET

Largest range

Compatible with every type of integration, network and load (direct readings up to 100 A and up to 12000 A on the CT).

Advanced connectivity

Available for all applications, including the most demanding, through advanced connectivity: Ethernet, Modbus, M-Bus.

RELIABLE AND EASY TO USE MEASUREMENT DATA

Certified measurements

Accurate and reliable measurements - MID "Module B+D" directive certified.

Integrated web server

Easy data exploitation thanks to a free integrated web server accessible on a standard web browser.

Advantages

Installation

Quick setup

It's simple to create, edit and save product settings with the Easy config System.

Available features:

- set up a new product offline,
- back-up the configuration to your PC,
- transfer the configuration to a device via the communication port.

Multiple communication protocols

To meet all your needs, COUNTIS E devices incorporate a **pulse output**, Modbus, M-BUS or Ethernet **communication ports**.

This communication feature allows you to:

- centralise your consumption,
- configure devices remotely via the Easy Config software or web server,
- access up to four tariffs (four time slots) to track your energy consumption in more detail,
- access more electrical parameters: I, V, P, Q, S and PF remotely.

Measurement

Reliable and safe

To guarantee a **100% reliable product**, the COUNTIS E range is **EN50470-compliant and MID "Module B+D" certified** attesting to a rigorous double check. Product design and manufacturing processes are approved by an accredited external laboratory.

COUNTIS E units comply with the MID directive in order to:

- guarantee metering accuracy and reliability,
- ensure accurate energy billing.

COUNTIS E units have tamper-proof components in order to:

- prevent attempted fraud,
- restrict certain functions (no reset).

Multi-tariff

It's now possible to **reduce costs** thanks to the meter's multi-tariff function, which facilitates energy usage at the most advantageous times.

With a single counter, the multi-tariff counting allows you to:

- measure your energy at various time slots (peak, non-peak),
- read your energy from different sources (normal, backup supply).

Current transformers

In order to get the best of your counters, select the Socomec's current transformers. Choose the rating, the size, the conductor size and the accuracy class to suit your needs.

Need multi-measurement ?

For existing sites and applications that require multi-measurement, discover our DIRIS Digiware scalable solution.

CRCODE:663_B_GB

Exploitation

Integrated web server

It's easy to **monitor, visualise and analyse** your consumption thanks to the integrated web server*.

Unlike traditional solutions, COUNTIS E meters integrate the web server without any additional cost. Surf easily on the web server with your internet browser (Internet Explorer, Firefox...).

With the web server function you can:

- monitor electrical units,
- view your energy consumption,
- configure the meter's main parameters,
- view and export energy values to CSV format (automatic export via FTP).

** Only available for products with an Ethernet port.*

Multipoint web server

For applications with multiple metering points, WEBVIEW-M which is embedded in the DIRIS Digiware M-70 gateway and D-70 display can integrate up to 32 measuring devices, including COUNTIS E energy meters:

- visualise real time parameters of your facility (I, V, F, P, Q, S and PF),
- visualise energy values (total and partial meters),
- record measurements and consumptions,
- export measurements and consumptions (manual or automatic via FTP) in a CSV format.

If more than 32 devices are used or if more memory depth is needed, the DATALOG H80 allows you to visualise and store data from up to 200 Socomec measuring devices and third-party Modbus devices over several years.

Expert Services

The ISO 50001 standard requires companies to:

- define their measurement equipment needs,
- regularly review the installed equipment,
- ensure that the equipment used for monitoring and measurement of the key characteristics is accurate, reliable and repeatable.

To guarantee the reliability of the data collected, the Expert Services technicians support you with services to verify the global measurement chain.
